In partnership with the Connecticut State Medical Society

CTHealthLink presents your ACO/IPA with actionable business intelligence based upon aggregated clinical data which better positions your organization to:

- Identify polychronic patients, gaps in care, 30-day readmission trends, emergency department utilization, and more.
- Improve quality metrics through targeted dashboards that identify patients in need of preventive care and wellness exams.
- Alert care coordinators when attributed patients are admitted to the Emergency Department/Inpatient or discharged.
- Identify high risk/high cost patients to help lower costs and increase shared savings through early intervention and informed care coordination.
- Employ NCQA-certified clinical data from the enterprise data warehouse to pursue increased value-based care reimbursement contracts from payers.
- Easily compute eCQMs across the ACO/IPA using an ONC-certified product.
- Facilitate complete diagnosis coding which supports accurate risk adjustment scores for patients.
